

# RCYC Weekly Meta Ads Deck — Update Playbook

## Overview

Every week, update the RCYC performance deck at [/home/ubuntu/rcyc\\_deck/](/home/ubuntu/rcyc_deck/) following this exact process. The deck covers **RAQ (Request a Quote)** and **RAB (Request a Brochure)** custom pixel conversion events only — never leads.

---

## Date Ranges

| Window           | Definition                                   | Example (week of Apr 28) |
|------------------|----------------------------------------------|--------------------------|
| Last 28 Days     | Rolling 28 days ending yesterday (not today) | Mar 31 – Apr 27          |
| MTD              | Apr 1 – yesterday                            | Apr 1 – Apr 27           |
| 90-Day Benchmark | Rolling 90 days ending yesterday             | Jan 27 – Apr 27          |

Always exclude today from all date ranges. Meta's "last 28 days" filter = yesterday minus 27 days.

---

## Campaigns to Include

### RAQ — 6 Campaigns

1. Core US/CA — `raq_ta:retargeting` c1:12.22.25 c2:x
2. Core Global — `raq_ta:retargeting` c1:1.5.25 c2:x
3. Comp Retest US/CA — `raq_ta:prospecting` c1:2.11.26 c2:comp-retest
4. Comp Retest Global — `raq_ta:prospecting` c1:2.27.26 c2:comp-retest-global
5. CRM US/CA — `raq_ta:retargeting` c1:3.18.26 c2:crmlist
6. CRM Global — `raq_ta:retargeting` c1:3.18.26 c2:crmlist-global

### RAB — 4 Campaigns

1. WTG Global — `rab_ta:prospecting` where\_to\_go\_2026 global

2. WTG US/CA — `rab_ta:prospecting` where\_to\_go\_2026 us-ca
  3. Core Global — `rab_ta:prospecting` c1:1.5.25 global
  4. Core US/CA — `rab_ta:prospecting` c1:12.22.25 us-ca
- 

## Conversion Metric Rules

- **ONLY use `cost_per_result`** from the MCP API — this is tied to the campaign's optimization event
    - RAQ campaigns → `offsite_conversion.fb_pixel_custom.RequestQuote`
    - RAB campaigns → `offsite_conversion.fb_pixel_custom.RequestBrochure`
  - **NEVER use `actions.lead`, `actions.offsite_conversion.fb_pixel_lead`, or raw pixel counts**
  - Conversions = `spend ÷ cost_per_result` (rounded)
- 

## Slides to Update Automatically (Every Week)

### Slide 2 — RAQ Global (Last 28 Days)

- Pull campaign-level data for Core Global + Comp Retest Global + CRM Global
- Date range: Last 28 days (Mar 31–Apr 27 format)
- Show: spend, RAQ conversions, CPR per campaign + total
- Include 90-day rolling benchmark CPR in insight callout

### Slide 3 — RAQ US/CA (Last 28 Days)

- Pull campaign-level data for Core US/CA + Comp Retest US/CA + CRM US/CA
- Same structure as Slide 2

### Slide 4 — MTD RAQ (All 6 Campaigns)

- Pull campaign-level MTD data for all 6 RAQ campaigns
- Bar chart: CPR by campaign
- KPI cards: total quotes MTD, blended CPR
- Sub-label: "90-Day Benchmark: \$X.XX" (not 28-day)

### Slide 5 — MTD RAB (All 4 Campaigns)

- Pull campaign-level MTD data for all 4 RAB campaigns

- Same structure as Slide 4

## RAB Global Slide — Last 28 Days

- Pull campaign-level data for WTG Global + Core Global
- Same structure as Slide 2

## RAB US/CA Slide — Last 28 Days

- Pull campaign-level data for WTG US/CA + Core US/CA
  - Same structure as Slide 3
- 

## Slides That Require Manual Data from User

### Slide 7 — RAQ Top Creative

- User provides platform screenshot: **Ads Manager** → **Creative view** → **Campaign name contains RAQ** → **This month**
- Columns shown: Spend, Link clicks, CTR (link click), RequestQuote, Cost per RequestQuote
- **Merge same-asset creatives** that appear multiple times (same ad running across ad sets)
  - Group by creative name (the **an** : portion of the ad name)
  - Sum: RAQ conversions, Spend
  - Recalculate blended CPR = total spend ÷ total conversions
- Show top 6 merged creatives ranked by volume
- Best CPR badge on lowest CPR creative

### Slide 8 — RAB Top Creative

- User provides platform screenshot: **Ads Manager** → **Creative view** → **Campaign name contains RAB** → **This month**
- Same merge logic as Slide 7
- Show top 6–7 merged creatives ranked by volume

## Country Slides

- User provides data separately each week
-

## 90-Day Benchmark Calculation

Pull each campaign at 90-day rolling window (yesterday minus 89 days → yesterday):

- Aggregate spend and conversions across all campaigns in each group (Global RAQ, US/CA RAQ, all RAQ, Global RAB, US/CA RAB, all RAB)
  - Blended benchmark CPR = total spend ÷ total conversions
- 

## Weekly Update Checklist

- ☐ Confirm date ranges (last 28 days = yesterday minus 27 days; MTD = Apr 1 or current month start → yesterday)
  - ☐ Pull 28-day data for all 6 RAQ campaigns (campaign level)
  - ☐ Pull 28-day data for all 4 RAB campaigns (campaign level)
  - ☐ Pull MTD data for all 6 RAQ campaigns (campaign level)
  - ☐ Pull MTD data for all 4 RAB campaigns (campaign level)
  - ☐ Pull 90-day data for all 10 campaigns (for benchmarks)
  - ☐ Update Slides 2, 3, 4, 5, RAB Global, RAB US/CA with new numbers and dates
  - ☐ Update 90-day benchmark labels on all performance slides (never say "28-Day Rolling")
  - ☐ Wait for user to provide creative screenshots → update Slides 7 & 8 with merged asset data
  - ☐ Wait for user to provide country data → update country slides
  - ☐ Present final deck
- 

## Key Reminders

1. **No leads** — only RequestQuote and RequestBrochure custom conversions
2. **Merge creatives** — same asset across ad sets must be combined (sum RAQ/RAB, sum spend, recalculate CPR)
3. **90-day benchmark** — always 90-day rolling, never 28-day
4. **Exclude today** — all date windows end yesterday
5. **Last 28 days ≠ MTD** — they are separate windows shown on separate slides
